

OneGuard utilizes the very best, 2nd generation transducer sensor cable made and is THE preferred sensor cable for Palace and Military applications in the UK!
Proven in the UK and Now Available in the USA!

Early Warning Perimeter Intruder Detection

The Most Versatile and Cost Effective Multi-Mission Early Warning Perimeter Intrusion Detection Alert System, Available Anywhere!

Underground - Fences & Walls – Roofs & More

OneGuard is designed with features that allow it to be a Self-Managed, Stand-Alone Platform, or an Add-On Interface with existing security systems.

Early-warning is the key to successfully minimizing and overcoming vandalism and burglaries as well as home tragedies like pool accidents or worse, home-invasion. Protecting the peripheries of structures and exposed assets through perimeter intrusion detection significantly increases the time necessary for countermeasures – and increases the odds of success. With this in mind, protection of businesses & homes, outbuildings, crop concentrations, boat houses, machinery & equipment, pools & hot tubs, garages & workshops, storage lots, fenced areas, pathways & access drives, roofs, and the like, is greatly enhanced with OneGuard perimeter coverage.
